Contents

Preface ix

Gutteridge J. M. C.
Oxigen radicals, transition metals and ageing 1

Eldred G. E.
Questioning the nature of the fluorophores in age pigments 23

Porta E. A.
Tissue lipoperoxidation and lipofuscin accumulation as influenced by age, type of dietary fat and levels of vitamin E in rats 37

Harman D.
Nutrition and age pigment: pathogenesis of senile dementia of the Alzheimer's type. (A review) 75

Sohal R. S.
Quantification of lipofuscin: a critique of the current methodology 85

Dowson J. A.
Quantitative studies of the effects of ageing, meclofenoxate and dihydroergotoxine on intraneuronal lipopigment accumulation in the rat 93

Glees P.
Removal of osmiophilic waste products, a lightmicroscopical and ultramicroscopical study 101

Katz M. L., Robison W. G. Jr and Drea C. M.
Factors influencing lipofuscin accumulation in the retinal pigment epithelium of the eye 111

Aloj Totaro E. and Pisanti F. A.
Lipofuscinogenesis and environmental stress: study in Torpedo m. neurons 133

Cuomo V., Aloj Totaro E., Vanzanella F., Russo P., D'Antonio S. and Caramia M.
Age pigments in fungi as a biological marker for heavy metal pollution in aquatic environments 147

Zuckerman B. M.
The nematode Caenorhabditis elegans as a model for rapid evaluation of cellular aging 155

Munkres K. D.
Neurospora age pigment resemble malonaldehyde polymers 165

Koppang N.
Hereditary ceroid lipofuscinosis in English setter dogs. A model for human neuronal ceroid-lipofuscinosis and aging 185

Jolly R. D., Barns G., Bube A. and Palmer D. N.
Ovine ceroid-lipofuscinosis: chemical constituents of the lipopigment, their pathogenic significance and similarities to age pigment 197

Rider J. A. and Rider D. L.
Batten's disease 217

Elleder M.
Some aspects of dynamics of lipopigment formation. Reflection based on the ultrastructure and histochemistry of appendical and liver biopsies in neuronal ceroid-lipofuscinosis and lysosomal storage diseases 227

Goebel H. H.
Ultrastructural features of lipopigments in neuronal ceroid lipofuscinoses, especially in biopsies 249

Davies I., Fotheringham A. P. and Roberts C.
Lipofuscin in the ageing hypothalamo-neurohypophyseal system 277

Spoerri P. E.
Mitochondrial degeneration, lipopigment formation and aging of neuronal cells in culture 301

Heinsen H.
Quantitative investigation on regional differences in lipofuscin accumulation in Purkinje cells of old rats 321

Barden H. and Brizzee K. R.
The histochemistry of lipofuscin and neuromelanin 339

Zs.-Nagy I.
An attempt to answer the questions of theoretical gerontology on the basis of the membrane hypothesis of aging 393

Index 415
